

- Remade—records whether the Card Resolutions tool was used to adjudicate the card; possible values include:
 - 0 = card was not resolved by the Card Resolutions tool (record is unmodified from the original scoring process)
 - 1 = card was resolved by the Card Resolutions tool
 - -2 = an election official determined that it is not a ballot based on the VISUAL examination
 - +1 = NOT REMADE and NOT votable; an election official VISUALLY determined that the image is only one piece of paper, but it is partially occluded (folded over, large bent corner, a work page in front of the real ballot, could not determine BallotStyleID/PrecinctID, could not FULLY vote a damaged ballot)
 - +2 = NOT REMADE and NOT votable; an election official VISUALLY determined that there are two or more pieces of paper within one image file
- Choice—contains one column for each possible choice. The header for each column is named Choice_X_X:<ContestName>:<VoteRule>:<ChoiceName>:<PartyName>, where X_X equals <ChoiceID>_<PartyID> and <ContestName>, <VoteRule>, <ChoiceName> and <PartyName> originate in the BDF and can be seen in the other applicable CVR CSV files. The values for these columns are 1 (vote) or 0 (nonvote).
- **Election_Name.choices.csv**—table that provides names for choice IDs; includes ChoiceID, ContestID and ChoiceName values
- **Election_Name.contests.csv**—table that provides names for contest IDs; includes ContestID and ContestName values
- **Election_Name.parties.csv**—table that provides names for party IDs; includes PartyID and PartyName values
- **Election_Name.precincts.csv**—table that provides names for precinct IDs and card style IDs; includes PrecinctID, PrecinctName and BallotStyleID values

4.1.1 Exporting a cast vote record

The ClearCount system provides a zipped file that contains the cast vote record (CVR) file set as comma-separated values (CSV) files.

To export a cast vote record:

1. Log in to a CountStation as an administrator.
2. From the drop-down list next to your name in the upper right corner, select **Election Administration**. The Election Administration page appears.
3. Locate the election with the CVR you want to export, click its **Actions** button and select **Export Cast Vote Record** from the drop-down list that appears. The [Server Background Jobs](#) page appears in a new browser tab. The launched report is topmost in the table and its job type (in the Job column) is *cvr_export*.

4. Wait until the Status column says *Completed* and a file named *<Election_Name>.cvr.zip* appears in the Final Result column, and then click the filename to download and save it. You can then open the file set using a third-party application, such as Notepad or Microsoft Excel.
5. (Optional) Delete the job from the [Server Background Jobs](#) page by clicking the button in the Actions column and selecting **Delete Job**.

The file resides on the CountServer computer until it is deleted, or until the CountServer computer is restarted.

4.2 Write-in Contests Results report

The exported Write-in Contests Results report for an election comprises the following set of comma-separated values (CSV) files with the indicated data:

- **Party Endorsement**—The political party designation (always *nonpartisan* for write-in votes)
- **Precinct Name**—The name of the precinct
- **Precinct ExportID**—(Optional) Unique identifier for the precinct when exported
- **Precinct ImportID**—(Optional) Unique identifier for the precinct when imported
- **Contest Name**—Descriptive name of the contest (this is what appears in reports)
- **Contest Short Name**—An abbreviated name for the contest
- **Contest ID**—Unique identifier for the contest
- **Contest ExportID**—(Optional) Unique identifier for the contest when exported
- **Contest ImportID**—(Optional) Unique identifier for the contest when imported
- **Write-in Name**—The name of the write-in candidate
- **Votes**—The number of votes received by the write-in candidate

The ClearCount system removes all duplicate write-in candidate assignments (when a unique write-in candidate name is assigned to more than one write-in choice zone for the same contest on the same card).

The Write-in Contests Results report does not include candidate names (or the unassigned category) that have zero votes.

4.2.1 Exporting write-ins results

The ClearCount system provides the write-in results for an election as a CSV file.

To export a write-in results:

1. Log in to a CountStation as an administrator.
2. From the drop-down list next to your name in the upper right corner, select **Election Administration**. The Election Administration page appears.
